

**Latin Name:** *Cyrtomium falcatum*  
**Common Name:** Japanese Holly  
**Fern**  
**Family:** Dryopteridaceae  
**Geographic Origin:** Asia

Soil: Use a well-drained, standard potting soil.

Temperature: Daytime temperatures should be between 70°-75°F and no cooler than 60°F at night.

Light: This plant prefers filtered sunlight or shaded areas.

Moisture: This plant prefers high humidity, so hand misting is recommended. Water once a week, allowing the soil to slightly dry between each watering.

Fertilization: This plant should be fertilized every other week, alternating between fish and seaweed fertilizers.

Grooming: Repot every spring. Remove dead foliage when needed. This plant is not draft tolerant.

Seasonal Care: Reduce watering and fertilizing during winter months.

Propagation: Propagate through division.

Pests and Diseases: Check for scale, root rot, and mealy bugs.

**Latin Name:** *Dryopteris affinis* 'Crispa Congesta'

**Common Name:** Scaly Male Fern

**Family:** Dryopteridaceae

**Geographic Origin:** Europe
